Assignment – 17

Constraining the Values of your data.

1) Create the Orders table so that all onum values as well as all combinations of cnum and snum are different from one another, and so that NULL values are excluded from the date field.

```
mysql>  create table orders2
    -> (
    -> onum int,
    -> cnum int,
    -> snum int,
    -> odate date not null
    -> ,
    -> primary key (onum,cnum,snum)
    -> );
Query OK, 0 rows affected (0.08 sec)
```

```
mysql> show indexes from orders2;
+---------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+---------------+
---------+------------+
| Table   | Non_unique | Key_name | Seq_in_index | Column_name | Collation | Cardinality | Sub_part | Packed | Null | Index_type | Comment | Index_comment |
 Visible | Expression |
+---------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+---------------+
---------+------------+
| orders2 |          0 | PRIMARY  |            1 | onum        | A         |           0 |     NULL |   NULL |      | BTREE      |         |               |
 YES     | NULL       |
| orders2 |          0 | PRIMARY  |            2 | cnum        | A         |           0 |     NULL |   NULL |      | BTREE      |         |               |
 YES     | NULL       |
| orders2 |          0 | PRIMARY  |            3 | snum        | A         |           0 |     NULL |   NULL |      | BTREE      |         |               |
 YES     | NULL       |
+---------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+---------------+
```

2) Create the Salespeople table so that the default commission is 10% with no NULLS permitted, snum is the primary key, and all names fall alphabetically between A and M, inclusive (assume all names will be uppercase).

```
+--------------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+-----------
----+---------+------------+
| Table        | Non_unique | Key_name | Seq_in_index | Column_name | Collation | Cardinality | Sub_part | Packed | Null | Index_type | Comment | Index_comm
ent | Visible | Expression |
+--------------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+-----------
----+---------+------------+
| salespeople2 |          0 | PRIMARY  |            1 | snum        | A         |           0 |     NULL |   NULL |      | BTREE      |         |
    | YES     | NULL       |
+--------------+------------+----------+--------------+-------------+-----------+-------------+----------+--------+------+------------+---------+-----------
```

3) Create the Orders table, making sure that the onum is greater than the cnum, and the cnum is greater that the snum. Allow no NULLS in any of these three fields.

```
mysql> insert into orders3 values
    -> (10,20,30);
ERROR 3819 (HY000): Check constraint 'orders3_chk_1' is violated.
```
